Job posting App

A job posting platform that should help recruiters to open new available vacancies and job seekers to find their next job.

The 2 main users are:
1- Applicants.
2- Organizations.

Both can register and login on the platform as a user then each one will have his own landing page based on his account type.

Organization:

1- Post a job vacancy on the platform. (Job posting must have an expiry date so if it is expired it won't be visible for applicants any more).
2- Follow the already opened vacancies.
3- Close previously opened job vacancy so that new applicants can't access it any more.
3- Check each opened vacancy applicants list.
4- Update each application status.
      A) Applied.
      B) Pending.
      C) Shortlisted.
      D) Rejected.

Applicant:

1- Check list of available vacancies.
2- Filter job vacancies by his own preferences (Job type).
3- Search a specific job openings.
4- Apply for a job (Uploading his CV and filling the required form inputs).
5- Check the list of jobs the user applied to previously.
6- Filter list by the application status.

*Bonus:
1- Notifications for both applicants and organizations to inform them about last job updates.
